

Evaluation Research: Methods of Assessing Program Effectiveness

Outcome Evaluation for Domestic Violence Programs Evaluation Issue Brief #1

Why Should We Want to Evaluate Our Work?

While the thought of "evaluation" can be daunting, if not downright intimidating for many domestic violence (DV) programs, there are many good reasons to evaluate the job we are doing. The most important reason, of course, is to understand the impact of programs and practices on the lives of survivors and their children in order to build upon those efforts that survivors say are helpful to them and stop putting time and resources into efforts that are not helpful or relevant to them. Evaluation is also important because it provides "hard evidence" to present to funders, policymakers, and allied organizations, encouraging them to continue and increase the resources available to support effective programs and approaches.

Most of us would agree that these are good reasons to examine the kind of job we're doing...BUT...we are still hesitant to evaluate our programs for a number of reasons.

Why Many Domestic Violence Programs Resist Evaluation (and reasons to reconsider!)

"Research has been used against victims and their children." It is true that people can manipulate or misinterpret research data. However, this is actually a reason why we need to understand and conduct our own evaluations. To effectively argue against the misinterpretation of other research, we must at least have a general understanding of how data are collected, analyzed, and interpreted.

(related): "I don't trust researchers." Too many programs have had bad experiences with researchers who come into their settings, collect their data, and are either never heard from again or who then interpret their findings without a basic understanding of domestic violence issues. In the academic arena we refer to this as "drive-by data collection," and we would strongly recommend programs turn such researchers away at the door. But please remember that working with a researcher to do program evaluation is optional. With basic information, you can conduct your own outcome evaluation.

"Funders (or the public) will use our findings against us." A common concern we have heard from program staff is that our own evaluations could be used against us because they might not "prove" we are effective in protecting victims from intimate partner violence. This fear usually comes from people who think that the funders (or the public) expect us, on our own, to end intimate partner violence. We would argue that it is unrealistic to expect victim service programs to end victimization – that is the role of perpetrator service programs as well as the larger community. We do, however, need to know if we are effectively meeting goals that are realistic.
