Neuromuscular junction

High Quality Content by WIKIPEDIA articles! A neuromuscular junction (NMJ) is the synapse or junction of the axon terminal of a motoneuron with the motor end plate, the highly-excitabile region of muscle fiber plasma membrane responsible for initiation of action potentials across the muscle's surface, ultimately causing the muscle to contract. In vertebrates, the signal passes through the neuromuscular junction via the neurotransmitter acetylcholine.

Frederic P. Miller, Agnes F. Vandome, John
McBrewster (Ed.)
