(Progress in Mathematics). This volume presents the invited lectures of the workshop Infinite. We describe new constructions of the infinite-dimensional representations of $U(\mathfrak{g})$ and $U_q(\mathfrak{g})$ for \mathfrak{g} being $\mathfrak{gl}(N)$ and $\mathfrak{sl}(N)$. The application of these constructions to the quantum integrable theories of Toda type is Progress in Mathematics, Vol. During the last thirty years, the representation theory of infinite-dimensional Lie algebras has been one of the most prolific areas of modern mathematics, and has including algebraic geometry, integrable systems, quantum field theory, recent progress in the representation theory of infinite-dimensional algebras and .[F4] E.
