

## Vitamins and Minerals

# Vitamins and Minerals

Whereas vitamins are organic substances (made by plants or animals), minerals are inorganic elements that come from the soil and water and are absorbed by plants or eaten by animals. Your body needs larger amounts of some minerals, such as calcium, to grow and stay healthy. Vitamins and minerals are considered essential nutrients because acting in concert, they perform hundreds of roles in the body. They help shore up bones, heal wounds, and bolster your immune system. They also convert food into energy, and repair cellular damage. Vitamins and minerals are necessary for the healthy functioning of our bodies but if you have a balanced diet, most can be found in the foods we eat. We all know that vitamins and minerals are important, but why? Here's what you need to know about what's in your food or your Flintstones chewables. Vitamin means 'vital for life'.
