

Rare-Element Geochemistry and Mineral Deposits (GAC Short Course Notes, 17)

Journal of Geosciences

CALL FOR PAPERS

MINERALOGICAL, GEOCHEMICAL AND ISOTOPIC LINKS BETWEEN GRANITIC PEGMATITES AND THEIR PARENTAL GRANITES

Dear colleagues,

We would like to draw your attention to the forthcoming special issue of *Journal of Geosciences* (<http://www.jgeosci.org>) devoted to granitic pegmatites and their parental granites. We invite you to submit your recent research results to this venue. Manuscripts will be accepted for review until September 30, 2009 and the publication is foreseen in spring 2010. All manuscripts will be reviewed by at least two international specialists in the field. The issue will be handled by guest editors Peter Nabelek (University of Missouri-Columbia) and Milan Novák (Masaryk University, Brno) to ensure fast publication in an open-access international journal.

Granitic pegmatites are rocks closely related to granites both in terms of their composition and genesis. In addition, the pegmatites are typically characterized by complicated zoned internal structure, presence of giant crystals and specific textures, highly diverse mineralogy and extreme degree of geochemical fractionation. Although the term "granitic" is involved in the title, the exact nature of the link between the pegmatites and related fertile (parental) granites is still enigmatic in many cases.

The forthcoming issue of the *Journal of Geosciences* is intended to contribute to recent discussion on granitic pegmatites and their origin; in particular involving genetic, spatial

and temporal relationships of both interior and exterior granitic pegmatites and their potential fertile (parental) granites.

The topics to be covered by this special issue are:

1. Geochemical, isotopic and mineralogical fingerprints linking granites and their exterior pegmatites.
2. Regional zoning patterns in distribution of individual pegmatite groups around granitic plutons.
3. Geochemical trends in granitic pegmatites and their fertile (parental) granites.
4. Compositional evolution of minerals from granites to their granitic pegmatites.
5. Timing and structural position of interior granitic pegmatites.

If you intend to submit a contribution to the special issue, please, indicate your interest to one of the guest editors within a month of receipt of this letter. The final submission date is **September 30, 2009**.

We are looking forward to your contributions to this venue.

Vojtěch Janoušek (*Editor-in-chief, editor@jgeosci.org*)
Peter Nabelek (*nabelekp@missouri.edu*)
Milan Novák (*mnovak@sci.muni.cz*)
